

Deaths

DEATHS

- The International Classification of Diseases Tenth Revision (ICD-10) was used for coding the 1999 through 2008 underlying cause of death. Changes from the previously used ICD-9 to the ICD-10 revision can make year-to-year comparisons misleading. ICD-10 contains major changes, so a greater or fewer number of deaths are now assigned to certain causes than under ICD-9 rules. Causes which changed the most include Alzheimer's disease, syphilis, and pneumonia. See the Introduction section of this publication for further explanation and detailed comparability ratios.
- Through 1969 age-adjusted death rates (AADR) were calculated using the 1940 standard million population. For 1970 and forward, AADR calculations have used the projected 2000 standard million population.
- In 2008, Florida resident deaths increased to 170,473. This is a 1.6 percent increase from 2007.
- The overall resident death rate per 1,000 population increased 1.1 percent from 9.0 per 1,000 population in 2007 to 9.1 per 1,000 population in 2008. Similar increases were evident for White males (from 10.3 per 1,000 population to 10.4 per 1,000 population), White females (from 9.3 per 1,000 population to 9.4 per 1,000 population) and Nonwhite females (from 5.1 per 1,000 population to 5.2 per 1,000 population). The Nonwhite male rate remained at 6.1 per 1,000 population.
- Of all resident deaths in 2008, 88.0 percent were to people of Non-Hispanic and Non-Haitian origin, 11.1 percent were to people of Hispanic origin, 0.8 percent were to people of Haitian origin, and 0.1 percent were to people whose ethnicity was unknown.
- In 2008, cremations outnumbered burials among Whites (58.6 percent to 28.4 percent). Among Blacks, burials outnumbered cremations 66.0 percent to 24.5 percent. For others, cremations outnumbered burials 53.3 percent to 32.8 percent.
- Heart disease was the leading cause of death in 2008, accounting for 24.6 percent of all deaths. The age-adjusted death rate for heart disease has steadily decreased since 1970 from 405.6 per 100,000 population to 155.0 per 100,000 population. Heart disease was the leading cause of death among individuals 85 years or older, accounting for 29.3 percent of deaths in this age group.
- Malignant neoplasm (cancer) was the second leading cause of death in 2008, accounting for almost 23.8 percent of all deaths. The age-adjusted death rate for cancer has steadily decreased since 1990 from 208.0 per 100,000 population to 161.2 per 100,000 population. Cancer was the leading cause of death for individuals aged 45-74 accounting for 30.9 percent of the total deaths in this age group.
- In 2008, the major external causes of death (unintentional injury, suicide, and homicide) accounted for 7.6 percent of all resident deaths.
- The age-adjusted death rate for unintentional injury decreased from 45.3 per 100,000 population in 2007 to 44.2 per 100,000 population in 2008. Unintentional injury was the leading cause of death for individuals aged 1-44. This cause of death accounted for 34.1 percent of the deaths in this age group.
- The homicide death rate decreased for White males (from 6.4 per 100,000 population in 2007 to 6.1 per 100,000 population in 2008), Nonwhite males (from 32.1 per 100,000 population in 2007 to 31.8 per 100,000 population in 2008), and Nonwhite females (from 5.2 per 100,000 population in 2007 to 4.9 per 100,000 population in 2008). However, the White female rate increased from 2.4 per 100,000 population in 2007 to 2.5 per 100,000 in 2008.
- There were 114 less HIV deaths in 2008 than in 2007, representing a 7.5 percent decrease. The age-adjusted death rate for HIV has steadily declined from 11.4 per 100,000 population in 2000 to 7.4 per 100,000 population in 2008. The resident 2008 HIV death rate for Nonwhite males (31.9 per 100,000 persons) was the highest in comparison to the rates for White males (5.6 per 100,000 population), White females (1.3 per 100,000 population), and Nonwhite females (17.3 per 100,000 population).
