

Deaths

## DEATHS

- The International Classification of Diseases Tenth Revision (ICD-10) was used for coding the 1999 and 2000 underlying cause of death. Changes from the previously used ICD-9 to the ICD-10 revision can make year-to-year comparisons misleading. ICD-10 contains major changes so that more or less deaths are now assigned to certain causes than under ICD-9 rules.
- Through 1998 Age-Adjusted Death Rates (AADR) were calculated using the 1940 standard million population. For 1999, AADR calculations used both the 1940 and the projected 2000 standard million population. For 2000, AADR calculations used only the projected 2000 standard million population.
- In 2000, Florida resident deaths increased to a record high 162,839, but the increase from 1999 was only 0.4 percent.
- The overall resident death rate per 1,000 population decreased slightly. The rate decreased slightly for white males, white females, nonwhite males, and nonwhite females.
- Of all resident deaths, 8.3 percent were to persons of Hispanic origin.
- Among whites, cremations outnumbered burials 49.2 percent to 34.5 percent. For blacks, burials outnumbered cremations 74.6 percent to 16.0 percent. For others, cremations outnumbered burials 49.3 percent to 38.3 percent.
- Heart disease was the leading cause of death — almost one of every three deaths.
- Malignant Neoplasm (Cancer) was the second leading cause of death accounting for almost one of every four deaths.
- Unintentional Injury (Accident) was the leading cause of death for 1-4, 5-9, 10-14, 15-19, 20-24, 25-34, and 35-44 year olds, accounting for 28.2 percent of the deaths in these age groups combined.
- There were 158 more H.I.V. deaths in 2000 than in 1999 — a 9.6 percent increase.
- The resident H.I.V. death rate for nonwhite males (52.4 per 100,000 population) is more than the rates for white males, white females and nonwhite females combined. H.I.V. was the fourth leading cause of death among nonwhites.
- H.I.V. was the second leading cause of death in persons 25-34 years of age, accounting for 12.9 percent of the total deaths — up from 12.8 percent in 1999.
- The homicide death rate dropped for white males, white females, and nonwhite females. The rate increased 13.3% for nonwhite males. The rate for nonwhite males was more than double the combined rate for white males, white females and nonwhite females.
- The major external causes of death (Unintentional Injury, Suicide, and Homicide) accounted for 5.8 percent of all resident deaths.
- Malignant Neoplasm (Cancer) was the leading cause of death for 45-54, 55-64, and 65-74 year olds — 35.0 percent of the total deaths in these age groups combined.

HOMICIDE	ICD-10: X85-Y09, Y87.1	2000	19	956	511	440	6.1	3.9	17.7	0.9983	
	ICD-9: E960-E969	1990	-	1,579	777	795	11.9	6.9	39.1		

\* Due to change from the 9th to the 10th revision of the International Classification of Diseases (ICD), 1990 categories have been adjusted to be comparable with 2000. National comparability ratios are presented above (and on pages xi - xiii) to adjust for discontinuities between ICD-9 and ICD-10 categorizations and coding.
